## Appendix A: <br> Analysis of Remaining Uninsured

We use the 2013 and 2014 American Community Survey (ACS) Public Use Microdata Sample (PUMS) to profile the characteristics of Californians who are uninsured (Table A1). ${ }^{1}$ The ACS PUMS is a large household survey administered annually by the U.S. Census Bureau that includes detailed individual-level information on a representative sample of California households. The California sample in the ACS is quite large-about 350,000 individuals in the 1-year annual files-allowing detailed analysis across different demographic and socioeconomic groups. We use the California sample for all analyses presented in the report. The ACS began collecting health insurance information starting in 2008. The insurance coverage question asks about health insurance coverage at the time of the survey which is administered throughout the calendar year. It is possible that some people who reported they did not have health insurance in 2014 gained coverage over the course of that year.

The ACS also collects information on populations living in group quarters, both in institutionalized settings such as nursing homes and correctional facilities, and non-institutionalized settings such as college dormitories. The group quarters are sampled in order to provide representative estimates for the populations residing there. Because the correctional population is our key group of interest-and there is information on health insurance coverage collected for individuals residing in both institutionalized and non-institutionalized group quarters, we include them in our analysis of uninsured rates.

[^0]TABLE A1
Demographic characteristics of California non-elderly adults, uninsured and total population

|  | Uninsured non-elderly adults |  | Total population non-elderly adults |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 2014 | 2013 | 2014 | 2013 |
| Male | 56.5\% | 55.6\% | 50.2\% | 50.3\% |
| Female | 43.5\% | 44.4\% | 49.8\% | 49.7\% |
| Age category |  |  |  |  |
| Age 18-24 | 17.8\% | 18.8\% | 16.2\% | 16.5\% |
| Age 25-34 | 29.1\% | 17.8\% | 23.2\% | 22.8\% |
| Age 35-44 | 22.3\% | 21.8\% | 21.1\% | 21.2\% |
| Age 45-54 | 18.9\% | 18.8\% | 21.2\% | 21.4\% |
| Age 55-64 | 11.9\% | 12.8\% | 18.3\% | 18.0\% |
| Race/Ethnicity |  |  |  |  |
| Latino | 60.4\% | 58.0\% | 37.7\% | 37.2\% |
| Non-Hispanic white | 23.4\% | 24.2\% | 40.0\% | 40.8\% |
| Non-Hispanic black | 5.4\% | 5.9\% | 6.5\% | 6.5\% |
| Non-Hispanic other | 10.8\% | 11.9\% | 15.9\% | 15.5\% |
| Education level |  |  |  |  |
| Less than high school degree | 33.1\% | 31.6\% | 16.5\% | 17.0\% |
| High school, no college degree | 55.6\% | 56.4\% | 55.0\% | 55.0\% |
| College degree | 11.3\% | 11.9\% | 28.5\% | 28.0\% |
| Marital status |  |  |  |  |
| Married | 35.7\% | 36.3\% | 47.6\% | 47.7\% |
| Divorced, widowed, separated | 13.9\% | 14.8\% | 13.2\% | 13.6\% |
| Never married | 50.4\% | 48.9\% | 39.2\% | 38.7\% |
| Disability status |  |  |  |  |
| With disability | 5.9\% | 6.4\% | 8.5\% | 8.5\% |
| No disability | 94.1\% | 93.6\% | 91.5\% | 91.5\% |
| Employment status |  |  |  |  |
| Employed | 60.5\% | 59.4\% | 68.3\% | 67.4\% |
| Unemployed | 10.9\% | 13.1\% | 6.3\% | 7.4\% |
| Not in the labor force | 28.5\% | 27.6\% | 25.5\% | 25.2\% |
| Poverty status |  |  |  |  |
| Under 138\% FPL | 39.0\% | 38.9\% | 22.3\% | 22.8\% |
| 138-250\% FPL | 30.1\% | 30.6\% | 19.6\% | 19.9\% |
| 250-400\% FPL | 17.4\% | 17.5\% | 19.0\% | 18.8\% |
| Over 400\% FPL | 13.5\% | 13.0\% | 39.1\% | 38.4\% |
| Citizenship status |  |  |  |  |
| US born | 48.6\% | 50.1\% | 66.1\% | 66.0\% |
| Naturalized citizen | 10.9\% | 12.8\% | 15.6\% | 15.6\% |
| Non-citizen | 40.5\% | 37.1\% | 18.3\% | 18.4\% |

SOURCES: American Community Survey, Public Use Microdata Sample, 2013 and 2014.
NOTES: Respondents are recorded as uninsured if they report not having any source of health insurance coverage at the time of the survey including private and public sources of insurance.

To better understand characteristics associated with individuals being uninsured, we performed a logistic regression analysis that modeled the outcome that a person did not have health insurance and controlled for a host of demographic and economic characteristics related to insurance coverage. We included a proxy measure of whether a person was an undocumented immigrant based on a procedure that assigns legal status to individuals in the ACS developed to create the California Poverty Measure (CPM); for more details, refer to the CPM Technical Appendix (Bohn et al. 2013). ${ }^{2}$ We transformed the coefficients shown in the table below to calculate predicted probabilities of whether individuals with a particular set of characteristics were uninsured in 2014. We present those probabilities in Figure 3 of our report.

TABLE A2
Logistic regression model results for uninsured status among non-elderly California adults

| Age 55-64 | 7.2\% | 16.4\% |
| Age 65+ | 1.8\% | 18.8\% |
| Education level |  |  |
| Less than HS degree | 31.2\% | 13.1\% |
| HS complete, no college degree | 65.2\% | 56.8\% |
| College degree | 3.6\% | 30.1\% |
| Marital status |  |  |
| Married | 14.5\% | 47.7\% |
| Divorced, widowed, separated | 23.4\% | 19.0\% |
| Never married | 62.1\% | 33.3\% |
| Disability status |  |  |
| With disability | 25.2\% | 10.7\% |
| No disability | 74.8\% | 89.3\% |

SOURCES: US Census Bureau, 2014 American Community Survey, 1-Year Estimates, Subject Table S2601B.
NOTES: Estimates are derived from a representative sampling of institutional group quarters that include adult correctional facilities. Only national estimates are available for the correctional population; state-level estimates are not published by the Census Bureau for this group.

## Appendix B: <br> Analysis of California's Jail Population

We use the BSCC-PPIC Multi-County Study (MCS) for our examination of the jail population. The MCS is a collaborative effort between the Public Policy Institute of California (PPIC) and the California Board of State and Community Corrections (BSCC) to capture in-depth, individual-level data from local correctional systems throughout the state in a select group of representative counties. We are able to use these data to provide previously unavailable information on the composition of the local jail population to guide policy decisions including the use of jail sites for health insurance enrollment.

The twelve counties currently participating in the MCS include Alameda, Contra Costa, Fresno, Humboldt, Kern, Los Angeles, Orange, Sacramento, San Bernardino, San Francisco, Shasta and Stanislaus. This group of counties comprises nearly two-thirds of the total state population and the local jail population and was selected to be representative of the state's racial/ethnic composition and regional distribution. Nonetheless, characteristics of the population in other local jurisdictions may be different.

TABLE B1
Demographic characteristics of front-door and back-door offender groups

|  | Front-door group | Back-door group |
| :--- | :---: | :---: |
| Population size | 455,000 | 71,191 |
| Gender |  |  |
| Male | $77.1 \%$ | $81.2 \%$ |
| Female | $22.9 \%$ | $18.7 \%$ |
| Race/Ethnicity |  |  |
| Latino | $43.3 \%$ | $38.1 \%$ |
| White | $29.0 \%$ | $32.5 \%$ |
| African American | $20.9 \%$ | $23.7 \%$ |
| Other | $6.8 \%$ | $5.7 \%$ |
| Age categories |  |  |
| Age 18-24 | $25.4 \%$ | $23.3 \%$ |
| Age 25-34 | $33.8 \%$ | $34.9 \%$ |
| Age 35-44 | $20.1 \%$ | $20.7 \%$ |
| Age 45-54 | $14.4 \%$ | $15.3 \%$ |
| Age 55-64 | $5.4 \%$ | $5.1 \%$ |
| Age 65+ | $1.0 \%$ | $0.7 \%$ |

SOURCE: MCS data, 2014.
NOTE: Jail population estimates are based on the stock of jail inmates in counties participating in the MCS. Adult population represents Californians age 18 and older in the 12 MCS counties.
