

Californians and Their Government—January 2017

Full Crosstabs – All Respondents

Methodology Note:

Findings are based on a survey of 1,702 California adult residents, with 60 percent interviewed on cell phones (1,021 interviews) and 40 percent interviewed on landline telephones (681 interviews). Live landline and cell phone interviews were conducted in English and Spanish according to the respondents' preferences. Interviews took an average of 21 minutes to complete. Interviewing took place on weekend days and weekday nights January 22–31, 2017.

The sampling error, taking design effects from weighting into consideration, is ± 3.3 percent at the 95 percent confidence level for the total unweighted sample of 1,702 adults. This means that 95 times out of 100, the results will be within 3.3 percentage points of what they would be if all adults in California were interviewed. The sampling error for unweighted subgroups is larger. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact surveys@ppic.org
