California’s Historic Corrections Reforms

September 28, 2016

Magnus Lofstrom, Mia Bird, and Brandon Martin
California saw a sharp rise in the prison population from the 1970s to 2006
- Prison population grew more than sevenfold (1980 to 2006)
- Corrections share of the state budget tripled

Prison population grew faster than capacity
- Overcrowding led to lawsuits

In 2009, a federal court ordered the state to reduce the prison population to 137.5 percent of design capacity
- This mandate triggered several reforms
Realignment and Proposition 47 are the most significant recent reforms

- **Public Safety Realignment (October 2011)**
  - Shifted funding and responsibilities from state to counties
    - Parole violators are no longer sent back to state prison
    - Most lower-level felons serve their sentence in county jail
    - Counties now supervise lower-level felons released from prison (on Post-Release Community Supervision, or PRCS)

- **Proposition 47 (November 2014)**
  - Reclassified a number of drug and property crimes from felonies to misdemeanors
Prison population has dropped by 41,600 since 2009
Jail populations rose after realignment, but dropped dramatically after Prop 47 passed.
Despite upticks in 2012 and 2015, California’s crime rates are at historically low levels.
What was realignment’s effect on crime?
- Reform added about 18,000 offenders on the street
- We estimate what crime trends would have been if realignment had not been implemented
- Most recent data for all states is from 2014

Crime rates increased in 2015
- Violent crime by 8.4%
- Property crime by 6.6%

Role of Prop 47 on crime remains to be seen
Violent crime trends in California and comparison states remain similar

- **Violent crime rate**
- **Year**
- California
- Comparison states
Since 2012, California has had higher rates of property crime relative to comparison states.
Recidivism rates remain high, but fewer offenders return to state prison

Two-year recidivism rates

- Rearrest
- Reconviction
- Return to prison

- All
- PRCS
- Parole
Offenders on county probation (PRCS) are at higher risk of committing another crime.
Corrections spending continues to grow and is at historic highs.
California has lower incarceration and low crime rates, but many challenges remain

- California still has about 200,000 inmates in jails and prisons, with state spending at nearly $12 billion
  - Prison population must stay below the federal mandate
  - State must continue to improve health care to regain control from the federal receiver
  - Counties must adapt to changing correctional populations
- Counties and the state must identify and implement cost-effective strategies to reduce reoffending
- Effects of Prop 47 on crime rates need further study
California’s Historic Corrections Reforms
