

Californians and Their Government

May 2016

Time Trends – All Respondents

Methodology Note:

Findings for May 2016 are based on a survey of 1,704 California adult residents, with 50 percent interviewed on landline telephones (853 interviews) and 50 percent interviewed on cell phones (851 interviews). Interviews took an average of 19 minutes to complete. Interviewing took place on weekend days and weekday nights May 13–22, 2016.

The sampling error for May 2016, taking design effects from weighting into consideration, is ± 3.3 percent at the 95 percent confidence level for the total unweighted sample of 1,704 adults. This means that 95 times out of 100, the results will be within 3.3 percentage points of what they would be if all adults in California were interviewed. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact surveys@ppic.org
