

# Californians and Education April 2016

## Time Trends – All Respondents

### Methodology Note:

Findings for April 2016 are based on a survey of 1,703 California adult residents, with 50 percent interviewed on landline telephones (851 interviews) and 50 percent interviewed on cell phones (852 interviews). Interviews took an average of 20 minutes to complete. Interviewing took place on weekend days and weekday nights April 3–12, 2016.

The sampling error for April 2016, taking design effects from weighting into consideration, is  $\pm 3.5$  percent at the 95 percent confidence level for the total unweighted sample of 1,703 adults. This means that 95 times out of 100, the results will be within 3.5 percentage points of what they would be if all adults in California were interviewed. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact [surveys@ppic.org](mailto:surveys@ppic.org)
