

Californians and Education—April 2017

Full Crosstabs – Likely Voters Only

Methodology Note:

Findings are based on a survey of 1,705 California adult residents, with 65 percent interviewed on cell phones (1,109 interviews) and 35 percent interviewed on landline telephones (596 interviews). Live landline and cell phone interviews were conducted in English and Spanish according to the respondents' preferences. Interviews took an average of 17 minutes to complete. Interviewing took place on weekend days and weekday nights April 2–11, 2017.

These crosstabs are based on a subgroup of 1,036 California adult likely voters. The sampling error, taking design effects from weighting into consideration, is ± 4.1 percent at the 95 percent confidence level for the unweighted sample of 1,036 likely voters. The sampling error for unweighted likely voter subgroups is larger. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact surveys@ppic.org

Note:

For questions asked of public school parents or parents only (Q24-Q24a and Q31), please refer to the Full Crosstabs – All Respondents document.
