

Californians and their Government—May 2021

Full Crosstabs – All Respondents

Methodology Note:

Findings are based on a survey of 1,705 California adult residents, with 75 percent interviewed on cell phone (1,255 interviews) and 25 percent interviewed on landline telephones (450 interviews). Live landline and cell phone interviews were conducted in English and Spanish according to the respondents' preferences. The sample included 520 respondents reached by calling back respondents who had previously completed an interview in PPIC Statewide Surveys in the last six months. Interviews took an average of 19 minutes to complete. Interviewing took place on weekdays and weekday nights from May 8–19 2021.

The sampling error, taking design effects from weighting into consideration, is ± 3.2 percent at the 95 percent confidence level for the total unweighted sample of 1,705 adults. This means that 95 times out of 100, the results will be within 3.2 percentage points of what they would be if all adults in California were interviewed. For the 1,566 respondents who answered Q15 and Q16, it is ± 3.3 percent. The sampling error for unweighted subgroups is larger. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact surveys@ppic.org

Note:

For questions related to the gubernatorial recall election (Q4-Q6), please refer to the Full Crosstabs – Likely Voters document.
