

# Californians and the Environment—July 2023

## Full Crosstabs – All Respondents

### Methodology Note:

Findings are based on a survey of 1,724 California adult residents, conducted online using the SSRS Opinion Panel, along with a supplemental address-based sampling (ABS) sample that allowed respondents to complete the survey online or via telephone. Of the total 1,724 interviews, 1,658 were completed online and 66 interviews were completed over the phone. Interviews were conducted in English and Spanish according to the respondents' preferences. The median time to complete the survey was 20 minutes via web, and 42 minutes via telephone. Interviewing took place from June 7–29, 2023.

The sampling error, taking design effects from weighting into consideration, is  $\pm 3.1$  percent at the 95 percent confidence level for the total unweighted sample of 1,724 adults. This means that 95 times out of 100, the results will be within 3.1 percentage points of what they would be if all adults in California were interviewed. The sampling error for unweighted subgroups is larger. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact [surveys@ppic.org](mailto:surveys@ppic.org)

### Note:

For questions asked only of likely voters (Q70-Q75, Q81–Q83), please refer to the Full Crosstabs – Likely Voters document.
