

# Californians and Their Economic Well-Being—December 2020

## Full Crosstabs – All Respondents

### Methodology Note:

Findings are based on a survey of 2,325 California adult residents, conducted online using the Ipsos KnowledgePanel. Interviews were conducted in English, Spanish, Chinese (simplified or traditional), Vietnamese, and Korean according to the respondents' preferences. The median time to complete the survey was 14.4 minutes. Interviewing took place from November 4–23, 2020.

The sampling error, taking design effects from weighting into consideration, is  $\pm 3.1$  percent at the 95 percent confidence level for the total unweighted sample of 2,325 adults. This means that 95 times out of 100, the results will be within 3.1 percentage points of what they would be if all adults in California were interviewed. The sampling error for unweighted subgroups is larger. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact [surveys@ppic.org](mailto:surveys@ppic.org)
