

# Californians and Education—April 2021

## Full Crosstabs – Likely Voters Only

### Methodology Note:

Findings are based on a survey of 1,602 California adult residents, conducted online using the Ipsos KnowledgePanel. Interviews were conducted in English, Spanish, Chinese (simplified or traditional), Korean, and Vietnamese according to the respondents' preferences. The median time to complete the survey was 18.6 minutes. Interviewing took place from April 1–14, 2021.

These crosstabs are based on a subgroup of 1,104 California adult likely voters. The sampling error, taking design effects from weighting into consideration, is  $\pm 4$  percent at the 95 percent confidence level for the unweighted sample of 1,104 likely voters. The sampling error for unweighted likely voter subgroups is larger. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact [surveys@ppic.org](mailto:surveys@ppic.org)

### Note:

For questions asked only of parents with school-aged children (Q8 – Q10), or asked only of parents of public school children (Q13 – Q14), or parents with children in the household (Q12, Q59 – Q61), please refer to the Full Crosstabs – All Adults document.
