

# Californians and Their Government—November 2019

## Full Crosstabs – Likely Voters Only

### Methodology Note:

Findings are based on a survey of 1,711 California adult residents, with 70 percent interviewed on cell phones (1,200 interviews) and 30 percent interviewed on landline telephones (511 interviews). Live landline and cell phone interviews were conducted in English and Spanish according to the respondents' preferences. Interviews took an average of 18 minutes to complete. Interviewing took place on weekend days and weekday nights November 3-12, 2019.

These crosstabs are based on a subgroup of 1,008 California adult likely voters. The sampling error, taking design effects from weighting into consideration, is  $\pm 4.3$  percent at the 95 percent confidence level for the unweighted sample of 1,008 likely voters. The sampling error for unweighted likely voter subgroups is larger. For the 682 Democratic Primary likely voters, it is  $\pm 5.1$  percent. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact [surveys@ppic.org](mailto:surveys@ppic.org)
