

Californians and Their Economic Well-Being—November 2022

Full Crosstabs – California Adults Earning Less Than \$40,000 Only

Methodology Note:

Findings are based on a survey of 2,307 California adult residents, conducted online using the Ipsos KnowledgePanel. Interviews were conducted in English, Spanish, Chinese (simplified or traditional), Vietnamese, and Korean according to the respondents' preferences. The median time to complete the survey was 17 minutes. Interviewing took place from October 7–21, 2022.

These crosstabs are based on a subgroup of 1,036 California adults earning less than \$40,000 annually. The sampling error, taking design effects from weighting into consideration, is ± 5.2 percent at the 95 percent confidence level for the unweighted sample of 1,036 California adults earning less than \$40,000 annually. The sampling error for unweighted lower income subgroups is larger. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact surveys@ppic.org

Note:

For questions related to the citizen's initiative process and potential reforms (Q66-Q71), please refer to the Public Crosstabs–Likely Voters document.
