

Californians and Their Government—December 2017

Full Crosstabs – Likely Voters Only

Methodology Note:

Findings are based on a survey of 1,704 California adult residents, with 65 percent interviewed on cell phones (1,108 interviews) and 35 percent interviewed on landline telephones (596 interviews). Live landline and cell phone interviews were conducted in English and Spanish according to the respondents' preferences. Interviews took an average of 17 minutes to complete. Interviewing took place on weekend days and weekday nights November 10–19, 2017.

These crosstabs are based on a subgroup of 1,070 California adult likely voters. The sampling error, taking design effects from weighting into consideration, is ± 4.3 percent at the 95 percent confidence level for the unweighted sample of 1,070 likely voters. The sampling error for unweighted likely voter subgroups is larger. Sampling error is only one type of error to which surveys are subject. Results may also be affected by factors such as question wording, question order, and survey timing.

If you have any questions or require additional information regarding this survey, please contact surveys@ppic.org
